

strati-fi™ Kit – RTU

Monitor & Control for Package Units & Heat Pumps

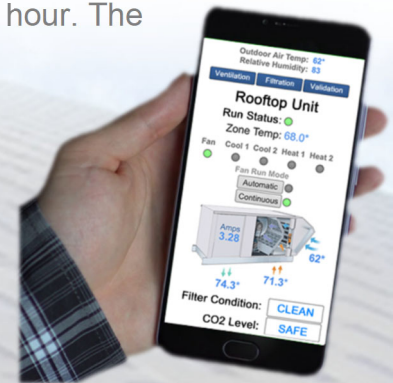

The Kit Includes:

- 1 strati-fi Wi-Fi Communication Module
- 1 Weather Resistant Prewired Enclosure
- 1 BC-iSTAT Unit Controller (PreProgramed)
- 1 Energy/Performance Sensor (amperage)
- 1 Zone Temperature Sensor with Slider/Push Button
- 1 Supply Air Temperature Sensor
- 1 Drawing Package with Installation Instructions

The kit consists of the strati-fi and BC-iSTAT Controller installed in an IP66 hinged door enclosure for easy mounting to the unit. This package installs very quickly, your data and the ability to control your unit can be available in less than an hour. The kit is powered with 24vac from the RTU.

Features:

- Unit start/stop and temperature control.
- Occupancy scheduling and Holiday setup from your Smart Device.
- Real-time supply air temperature data for performance monitoring.
- Real-time current reading to validate fan and compressor operation.
- Real-time energy usage and cost monitoring.
- Receive fault or operational alarms via email or text message.

Log into your account and use your customized Smart App to monitor and control in real-time, view historical trends and alarm conditions.

Powerful and Easy-To-Use

Our kits are designed to install quickly and easily without affecting the operation of your existing unit (short shutdown for safety of installer).

Extend the life of your HVAC equipment and save money by ensuring they work as designed.

Save Energy & Maintenance Costs

Monitor and control multiple units and use actionable data to dispatch maintenance personnel to address failing equipment.

Generate reports from stored data to show unit performance and plan repairs intelligently.
