

strati-fi_{ip} Kit – PowerMon-03

Real Time 3-Phase Power Monitoring & Analytics Determine operational efficiencies of electrical loads

The PowerMon-03 Kit Includes:

- 1 strati-fi Wi-Fi communication module
- 1 weather resistant prewired enclosure
- 3 self powered, split core current transducers
- 1 installation instructions & setup guide
- 12 month prepaid mystrati-fi.com account
- Optional, Cellular uplink

Know where your money is being spent by monitoring your energy usage in real time. Validate energy efficiency projects, collect data for LEED certification.

Be alerted via email or text message if your unit is running when it should be OFF, or if it is off when it should be ON.

Benchmark units against each other and identify failing parts or inefficient settings.

Set usage limits and be notified before you exceed costly demand or usage charges.

PowerMon kits are available in single phase too; both kits have optional outputs for remote control of loads (on/off and proportional outputs).

Log into your mystrati-fi.com account and monitor data in real time or view historical trends and alarm conditions.

Powerful and Easy-To-Use

The PowerMon kit is designed to install quickly and easily without affecting the operation of your existing unit. It is simple to configure using your Smartphone or Tablet over a secure connection on your existing 802.11b/g/n Wi-Fi network.

No Wi-Fi at your unit, simply ask for the Cellular Uplink option and create an independent network of strati-fi kits.

Save Energy & Maintenance Costs

Monitor multiple units, and use actionable data to dispatch maintenance personnel to address failing equipment.

Generate reports from stored data to show unit performance and plan repairs intelligently.

Extend the life of your HVAC equipment and save money by ensuring they work as designed.
