

strati-fi™ Kit – Tstat_Pkg-03

Thermostat Control for Package Units & Heat Pumps

The Tstat_Pkg-03 Kit Includes:

- 1 strati-fi Wi-Fi communication module
- 1 Weather resistant prewired enclosure
- 1 STAT-BC32 configurable thermostat
- 1 Supply air temperature sensor
- 1 Current sensor (amperage)
- 1 installation instructions & setup guide
- Optional, Cellular uplink

The kit consist of the strati-fi pre-mounted in a 4"x4" IP66 enclosure with knockouts for easy mounting to the exterior of a unit. The CPU based thermostat can be configured for traditional package A/C control strategies. Supports up to 3 heat and 2 cooling stages. Accepts external sensors for occupancy, CO2, temperature and more.

- 7 Day Programmable, schedule four on/off times with setpoints per day.
- Large display, auto or manual change over, keypad and/or setpoint lockout.
- Current and supply air temperature sensor for performance monitoring.
- Real time energy usage and cost monitoring.
- Receive fault or operational alarms via email or text message.
- Accessible from the Internet through a strati-fi website account.

Log into your mystrati-fi.com account and monitor data in real time or view historical trends and alarm conditions.

Powerful and Easy-To-Use

The Tstat_Pkg-03 kit is designed to install quickly and easily without affecting the operation of your existing unit.

It is simple to configure using your Smartphone or Tablet over your existing Wi-Fi network.

No Wi-Fi at your unit, simply ask for the Cellular Uplink option and create an independent network of strati-fi kits.

Save Energy & Maintenance Costs

Monitor multiple units, and use actionable data to dispatch maintenance personnel to address failing equipment.

Generate reports from stored data to show unit performance and plan repairs intelligently.

Extend the life of your HVAC equipment and save money by ensuring they work as designed.
